Of

NEW JERSEY

TRENTON, N. J.

1901

## **Trenton (G6), Mercer County.**

On the Pennsylvania Railroad and the Philadelphia and Reading Railway, also the Delaware and Raritan Canal. Stations of both roads near the principal business sections of the city. Population, 73,307. A banking town, eight banks. Money order post-office and telegraph stations of all companies. Express service, Adams and United States Companies. Tax rate, \$2.15.

The city of Trenton, capital of New Jersey, is situated the Delaware River at the head of navigation, thirty-three miles from Philadelphia and fifty-nine miles from New York.

Fine iron bridges connect it with Morrisville and the fertile farm lands of Bucks county, Pennsylvania. Covering an apex in the Delaware River, it has a widely extended water front upon that stream.

There is an excellent sewerage system, good water supply owned by the public, a paid fire department and efficient police protection, electric and gas lighting, trolley roads running to all parts of the city, numerous local and long distance telephone stations, well-paved streets, and all other conveniences of a large modern city.

There are forty-eight churches, embracing every religious denomination. The public schools include a high school and twenty subordinate schools, besides which the State Model and Normal Schools, with awards of 1,000 pupils, is located here. In addition to these there are three business colleges, seven parochial schools, and more than a dozen private schools.

An active and energetic Board of Trade looks after the business interests of the city, and there are many Building and Loan Associations that places the acquisition of homes within reach of workingmen.

Trenton is preeminently a manufacturing city. Thirty-six potteries, among them some of the largest in the country, make all classes of ware, from common drain pipe to the finest china. Tile manufactories and many brick yards, the products of which are the finest in their line, are also here. Iron and steel works, woolen mills, rubber and oilcloth factories, and large breweries, each employing hundreds and in some cases thousands of skilled workman at good wages, are other representative industries. Here also are located the great iron works of the Roeblings, builders of the bridge between Brooklyn and New York.

Trenton is famous for the liberal encouragement its Board of Trade extends to new industries seeking a location within the city limits. Factory sites of any size in choice positions, with every possible advantage of proximity to the railroads, are offered at merely nominal prices, and in case of particularly desirable industries financial assistance is given in the form of subscriptions to capital stock.

The facilities for transportation are not surpassed elsewhere in the entire country. Rents and costs of living are very low, as are also taxes for the reason that probably no municipal government in New Jersey is more economically administered than is that of Trenton.

The labor force includes the most skilled mechanics in every line of industry, and is singularly free from the influences that disturb workmen in some other large centers of manufacturing industry.

The following is a list of the principal manufacturing establishments now in operation:

American Saw Company, manufacturers of saw and wrenches; employs 50 persons.

Providential Tile Works, manufacturers of glazed and vitrified tilts; employs 50 persons.

Trent Tile Company, manufacturers of glazed and vitrified tile; employs 300 persons.
